Stormwater Pollution Prevention

Tips for the Automotive Industry

NO DUMPING
DRAINS TO STREAM
DAVIS COUNTY
451-3296
CALL TO REPORT SPILLS

Areas of Concern:

- Cleaning Engines and Parts
- Storage of Hazardous Materials
- Waste Recycling and Disposal
- Drainage in Work and Fueling Areas
- Preventing Leaks and Spills

Cleaning Engines and Parts

Do not wash parts or equipment in a shop sink, parking lot, driveway or street. Scrape parts with a wire brush or use a bake oven rather than liquid cleaners. Arrange drip pans, drying racks and drain boards so that fluids are directed back into the parts washer or the fluid holding tank.

Storage of Hazardous Materials

Store all materials under cover with spill containment or inside to prevent contamination of rainwater runoff. Keep liquid waste segregated. Many fluids can be recycled by hazardous waste disposal companies if they are not mixed.

Waste Recycling and Disposal

When possible, recycle and reuse liquids, tires, batteries, and metal scraps. Combining different types of hazardous waste will limit recycling options and can be dangerous. A licensed hazardous waste hauler can provide information on waste storage and disposal costs.

Cleaning Spills

Clean up spills immediately by using absorbents such as rags, kitty litter or sand. If the material spilled is hazardous (solvents, gasoline, oil, etc.), dispose of the soiled absorbents at a hazardous waste facility. If the material spilled is not hazardous, dispose of these items in the trash.

Drains in Work and Fueling Areas

Locate storm drains on or near your property. Know the sources of pollution from your business and do not allow materials to flow into the drains. Perform automotive projects under cover and in a controlled area. Identify specific activities with the potential to cause spills or release pollutants such as oil, grease, fuel, etc. Post signs and train employees on how to prevent and clean up spills during these activities

Preventing Leaks and Spills

Train employees on how to properly clean up spills and waste. Document employee training. Keep a spill kit with absorbent materials in the work area. Empty drip pans into a labeled, sealed container before they are full. Check equipment, wipe up spills and repair leaks daily. Place large pans under wrecked cars until all fluids are drained. Promptly dispose of collected fluids in a hazardous waste drum.

Stormwater 101

Clean wetlands and healthy streams are important to Davis County. The water from parking lots, driveways, and streets flow into the storm drain and into streams, wetlands, etc. eventually discharging into the Great Salt Lake. Stormwater runoff is **never treated**. Pollution entering the storm drain makes the waterways unsafe for people and wildlife. Following these management practices will prevent pollution, comply with regulations, and protect public health.

Tips for Fueling Stations

NO DUMPING
DRAINS TO STREAM
DAVIS COUNTY
451-3296
CALL TO REPORT SPILLS

Areas of Concern:

- Emergency Response Plans
- Know Storm Drain Locations
- No "Topping-Off"
- Uphold Cleanliness and Order
- Keep Suitable Clean-up Material.

Did you know?

Storm drain water is NEVER treated.

Stormwater 101

Clean wetlands and healthy streams are important to Davis County. The water from parking lots, driveways, and streets flow into the storm drain which goes untreated into the streams, wetlands, and eventually enters the Great Salt Lake. Pollution entering the storm drain makes the waterways unsafe for people and wildlife. Following these management practices will prevent pollution, comply with regulations, and protect public health.

Emergency Spill Response Plan

Maintain an Emergency Spill Response Plan. Keep employees trained in spill response procedures.

Know Storm Drain Locations

Locate storm drains on or near your property. Know the sources of pollution from your business and do not allow materials to flow into the drains

Operate fueling areas so that spills can be contained and runoff cannot carry spills into the street, gutter, or storm drain.

No Topping-Off

Encourage customers to not top-off their fuel tanks by posting "No Topping-Off" signs

Uphold Cleanliness and Order

Uphold cleanliness and order of the site by keeping waste picked up and regularly sweeping the parking and fueling areas

Keep Suitable Cleanup Material

Keep suitable cleanup material at the site for prompt cleaning of all spills

- Absorbent materials like spill pads, rags, kitty litter, or sand will be effective in containing certain spills
- Do not wash any spills into the gutter or storm drain
- If the material spilled is hazardous, dispose of the soiled absorbents in the same manner as hazardous waste. If the material spilled is not hazardous, dispose of these items in the trash.

Stormwater Pollution Prevention

Tips for Mobile Cleaners

NO DUMPING
DAVIS COUNTY
451-3296
CALL TO REPORT SPILLS
DRAINS TO STREAM

Best Management Practices for:

- Carpet Cleaners
- Upholstery Cleaners
- Drapery Cleaners
- Window Washers
- Janitorial & Housekeeping Service Providers
- High Pressure, Steam Cleaners

Stop!

Never discharge/place wastewater into a street, gutter, parking lot or storm drain.

Stormwater 101

In Davis County, any water that enters our storm drain system from rain storms, snow melt, irrigation etc. discharges into our creeks and eventually enters wetlands and/or the Great Salt Lake. This water travels over the ground picking up various pollutants.

This water is never treated.

Both residents and professional carpet cleaners should be sure that the carpet was not contaminated with hazardous materials. Hazardous materials cannot be discharged to the sanitary sewer, and need to be disposed of at a hazardous waste facility.

Hazardous Waste

Although mobile cleaners and pressure washers discharge waste water at various locations, professional carpet cleaners as well as residents should use the following practices in order to prevent waste or wastewater from entering the storm drains where it flows **untreated** to our streams, wetlands and to the Great Salt Lake:

General Practices

- Waste resulting from cleaning activities cannot be discharged into a storm drain.
- Mobile cleaners should have the equipment, materials and personnel to handle a spill. Take preventative action to act quickly to reduce illegal discharge.
- If a spill occurs, use environmentally-friendly products (e.g. kitty litter) to contain the spilled materials. Protect storm drains. Report all spills and discharges that cannot be contained to local authorities for their help.
- Dispose of spill clean-up material properly in a garbage container.

Consider Your Options

Consider your options for wastewater disposal. DO NOT discharge into a street, storm drain or gutter as these are all part of the stormwater system. An acceptable discharge option would be to dispose into sanitary sewers at the job site. These include sinks, showers, bath tubs, toilets or floor drains. Be sure to obtain the consent of the property owner before dumping and use a lint trap or filter to prevent debris from clogging the drain and pipes. Dispose of the lint in the regular trash.
